

From Figma Design to Real Mobile App

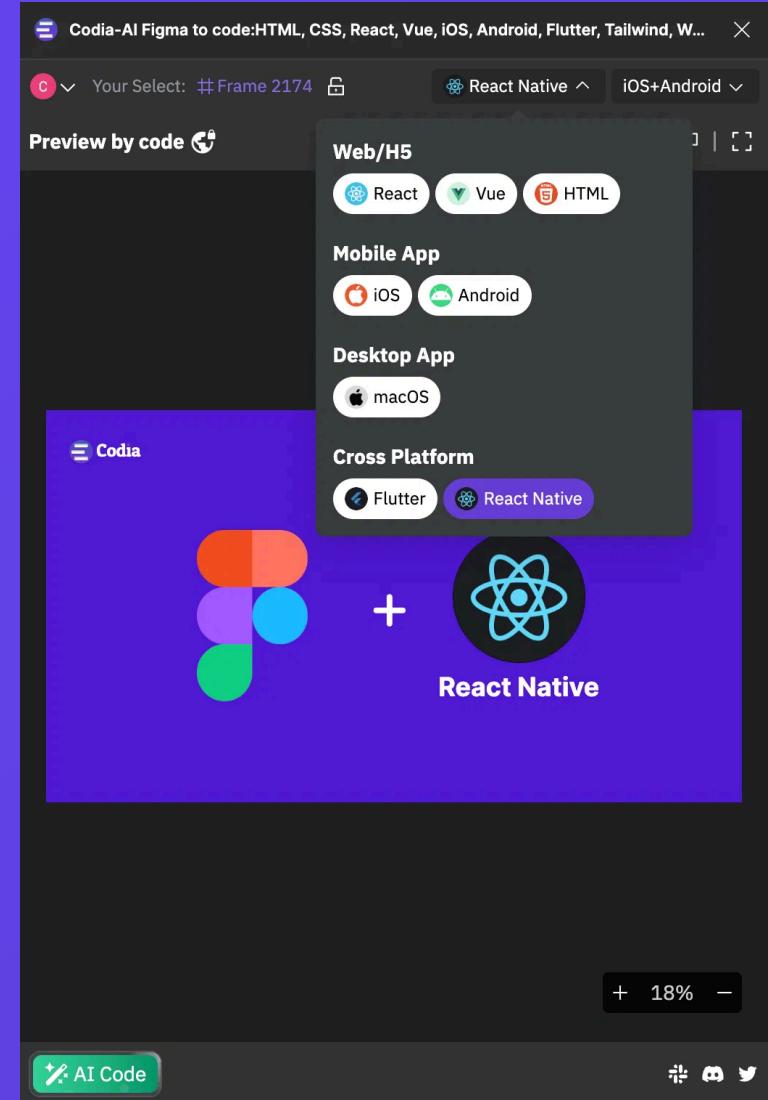

**Turn your Figma screens into a
working React Native app in
about 60 seconds.**

Codigma.io helps you ship production-ready
mobile apps much faster. Figma → Code → Real
iOS & Android preview → Download your project.

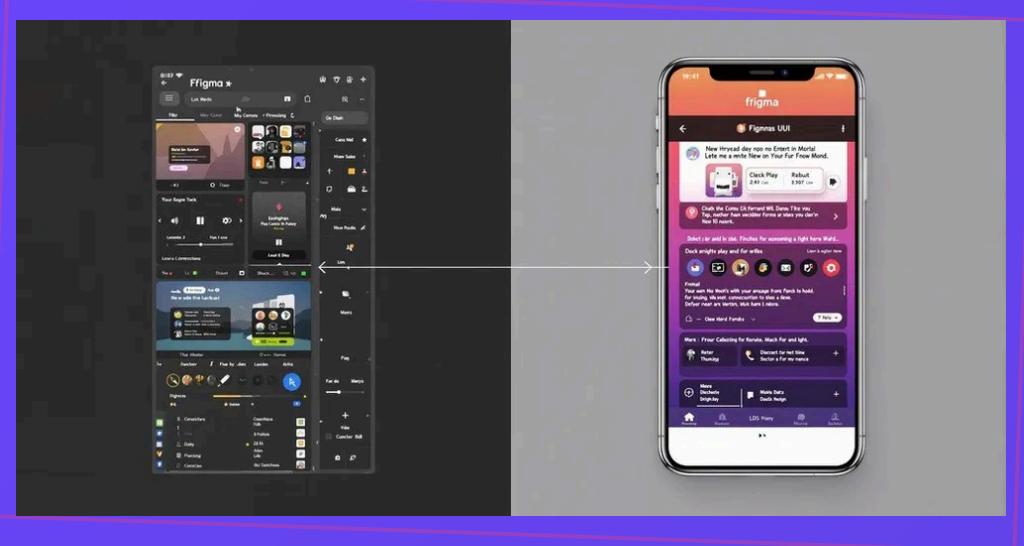

What is Codigma.io?

- ▶ Codigma.io is a tool that turns your Figma designs into a real mobile app built with React Native.
- ▶ You pick a Figma layer or screen.
- ▶ Codigma.io creates the React Native code for you.
- ▶ You can see and edit the result in a live editor.
- ▶ It feels like moving your design from "idea" to "working app" in one short step.

Why is Figma to App so Hard?

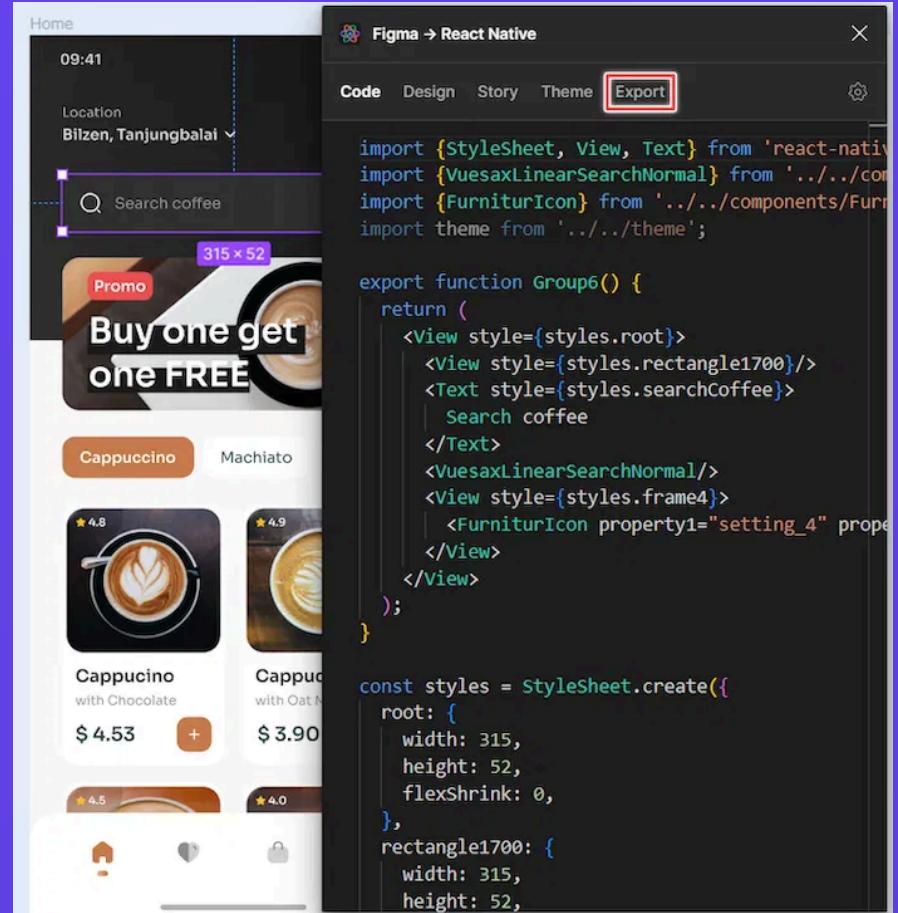

Right now, most teams do this by hand:

- ▶ Designers work in Figma.
- ▶ Developers copy the design and rebuild every screen in code.
- ▶ Small design changes often mean more hours of coding.
- ▶ This slows down releases and makes people repeat the same work.
- ▶ There is a lot of waste between "nice design" and "real app".

Codigma.io: A Faster Way from Figma to App

- ▶ Codigma.io connects Figma and React Native.
- ▶ You choose a Figma layer, frame or component.
- ▶ Codigma.io reads the design and builds the screen in code.
- ▶ You get a ready React Native view that matches your Figma design.
- ▶ You can see it running on iOS and Android, in your browser.

Ship a production-ready mobile screen in 60 seconds instead of 6 hours.

From Figma to App in 4 Simple Steps

1

Pick in Figma

Select the layer, frame or screen you want to turn into a mobile view.

2

Send to Codigma

Codigma.io reads the Figma data and builds the layout and styles.

3

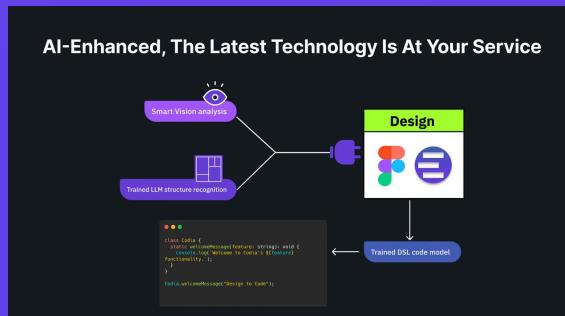

See in Emulator

The screen opens in the built-in Expo Snack editor with real iOS and Android emulators.

4

Download or Continue

Download the React Native project, or keep editing it inside Codigma.io.

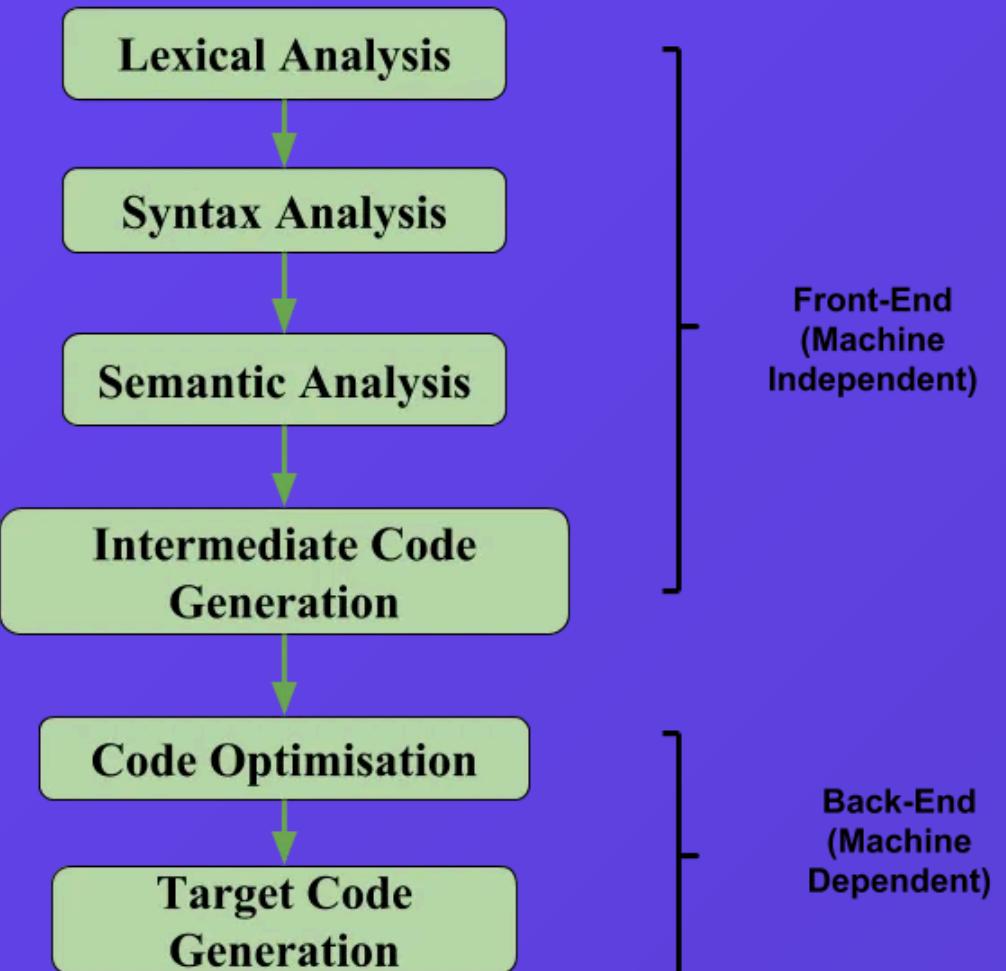

What Happens Behind the Scenes?

You don't see it, but Codigma.io does a lot of work for you:

- ▶ It understands your Figma layers and structure.
- ▶ It turns that into a clean layout.
- ▶ It creates React Native components and styles.
- ▶ It sends everything to Expo Snack so you can test it right away.

You stay focused on the design and the product, not on manual layout code.

Who is Codigma.io For?

Designers

- ▶ See your Figma design as a real mobile screen.
- ▶ Show your work in a live app, not only as images.

Developers

- ▶ Start from auto-generated React Native code instead of a blank file.
- ▶ Spend more time on logic and APIs, less on basic layout.

Founders & Product Teams

- ▶ Turn ideas into working demos very fast.
- ▶ Test features and flows with users earlier.

Why Teams Choose Codigma.io

- ✓ Saves many hours of front-end work.
- ✓ Keeps design and app closer to each other.
- ✓ Gives you clean React Native code you can really use in production.
- ✓ Lets you preview on iOS and Android without installing tools on your computer.
- ✓ Makes it easy to go from "Figma file" to "real app" in one day, or even one hour.

Less copy–paste. More shipping.

Who is Behind Codigma.io?

Codigma.io is built by Rast Mobile, a software company that creates:

- ▶ Mobile apps
- ▶ AI-powered tools
- ▶ Custom software for companies

We use our real project experience to build tools that we also like to use as developers.
